Open to relocation across India

Summary

Final-year Computer Science (AI/ML) student with internship experience at Oracle and IBM building LLM-driven tooling — agent skills, retrieval-based workflows and model evaluation — alongside applied deep learning projects in reinforcement learning and computer vision.

Experience

Oracle Hyderabad
Project Intern, Intelligent Automation Jan 2026 – Jul 2026

- Authored a custom **Codex agent skill** implementing a 7-factor risk model that scores case severity and module criticality, replacing ad-hoc triage with repeatable, data-driven prioritisation.
- Applied **retrieval-augmented (RAG)** lookup over Oracle's internal database to surface semantically equivalent existing cases before new ones were authored, cutting hours of manual review per cycle.
- Catalogued reproducible **hallucination patterns** from LLM inference results and fed them into release-readiness decisions.
- Automated **50+** LLM-driven validation workflows in Java and Selenium, removing manual effort across model evaluation cycles.

IBM Remote
Intern Jun 2025 – Aug 2025

- Built an **NLP-based resume parser** with **92% accuracy** across 500+ resumes.
- Deployed the scoring model behind an ATS that ranked candidate–job relevance in resume screening workflows.

Projects

Adaptive Traffic Signal Control Using Deep RL Jan 2026 – Present
Python, SUMO, DQN, CNN

- Trained a **DQN** policy for adaptive signal control in SUMO, cutting average queue length by **50%** against a fixed-time baseline.
- Improved cumulative penalty from -100,000 (fixed-time) to -40,000 (**60% reduction**) across evaluation runs.
- Modelled queue length, waiting time and traffic-state transitions into a **117-state** observation space driving multi-intersection signal timing.
- Extending the work into a research paper on RL-based traffic signal optimisation (in preparation).

Poaching Detection System Aug 2025 – Dec 2025
Python, YOLOv11, Raspberry Pi 3B, AWS EC2

- Deployed a **motion-gated YOLOv11** detection pipeline on a Raspberry Pi 3B, triggering inference on sensor events rather than continuous capture to stay within edge compute limits.
- Cut false alerts by combining motion-sensor triggers with clustering-based spatio-temporal filtering.
- Automated 20-second alert clip capture on detection, with AWS EC2 backing for offload and storage.

Technical Skills

- **Languages:** Python, Java, C++, SQL
- **AI/ML:** Deep Learning, Computer Vision, NLP, Reinforcement Learning (DQN), CNNs, YOLO
- **Generative AI:** LLMs, RAG, Prompt Engineering, LLM Evaluation, Hallucination Analysis, Agent Skills
- **Tools & Cloud:** OpenCV, pandas, NumPy, Matplotlib, Selenium, SUMO, Docker, Kubernetes, Azure AI, AWS EC2, Git

Education

University of Petroleum and Energy Studies Dehradun, India
B.Tech, Computer Science — specialisation in AI/ML | CGPA: 9.2/10 Aug 2022 – Oct 2026 (Expected)
Ess Ess Convent Sr. Secondary School, Agra — Class XII, 91.8% (2022) | St. Peter's College, Agra — Class X, 95.67% (2020)

Certifications

- Microsoft Azure AI-102: Designing and Implementing a Microsoft Azure AI Solution
- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate
